Adj. Prof. Dr. med. Tit Albrecht

Scientific Coordinator CrANE

Dr. med. Ellen Griesshammer

CrANE WP 6 Leader

Network of Comprehensive Cancer Centres: Preparatory activities on creation of National Comprehensive Cancer Centres and EU Networking (CrANE Joint Action)-brings together 46 partners from 25 Member States across Europe. The CrANE Joint Action aims to build upon the outcomes of previous CANCON and iPAAC Joint Actions, preparing the necessary preconditions, administrative or professional towards Networks of Comprehensive Cancer Centres. This is necessary to facilitate both the integration of the existing CCCs as well as to support the Member States who still need to develop and certify such centres. The CrANE JA will also provide an assessment on sustainability and feasibility as well as link the development of an EU Network of CCCs and CCCs in individual Member States to the development of national and regional tumour-specific CCCNs. This way, the existing organisational and functional models of cancer care will be taken into account and incorporated into the proposed solution. Further information can be found under: <https://crane4health.eu/>. The CrANE Joint Action is received funding from the European Union through the European Health and Digital Executive Agency (HaDEA) within the framework of the EU Health Program (EU4Health) 2021-2027.
